

Innovative HealthCare Products

The Aqua Thermassage is a heated, dry-hydro therapy unit that contains five rotating hydro jets, producing a vigorous hydro massage. As the fully-clothed patient lies upon a water-filled, full-body length tank with vinyl top covering, pressurized water is pumped to the five jets, combining flotation, heat and massage to induce a state of total relaxation.

The jets are strategically placed from the cervical spine to the sacrum in the 110V model. The 220V model offers jet pressure to the lower body and extremities, allowing the patient to monitor pressure and area with a hand-held control.

Model 110V features a full 2HP motor/pump and the 220V uses a 2½ HP XP heavy-duty motor pump. Both models are shipped fully assembled and ready to add distilled water for use.

The therapeutic effects of the *Aqua Thermassage* are unmatched by any other adjunctive treatment available. Patients *love* using this table. After a 10 to 15 minute session on the Aqua Thermassage, patients are typically more compliant and easier to adjust.

Specifications

Length	84 inches
Width	32 inches
Height	24 inches
Water	25 gallons
Power	110 volt; 220 volt
Motor	2 HP; 2½ HP

Comprehensive Warranty

Frame	3 years
Vinyl Barrier	2 years
All mechanical and Electric	1 year

Features

- A welded tubular steel frame
- An adjustable timer located on the table or at remote location.
- Patients
- No attendant required
- Ground fault interrupter (GFI)
- Can be used on all people, young or old
- Thermostat controls temp. (70° to 105°)
- Durable, molded plastic exterior, easy to clean and maintain
- Energy-saving, insulated cover included
- Worry and maintenance-free operation
- No installation, just add water
- Distinctive, professional appearance
